

Job Summary:

We are looking for a highly motivated and detail-oriented **Data Analyst/Data Scientist** with a strong foundation in **Analytics or Data Science**, excellent programming skills in **Python and SQL**, and a solid understanding of **Data Modelling** and **Data Warehousing** concepts. The ideal candidate will work closely with cross-functional teams to transform data into actionable insights and support data-driven decision-making.

Key Responsibilities:

- Design and implement data pipelines using **Python** and **SQL**.
- Develop and maintain **data models** to support business intelligence and analytics.
- Work with large datasets to extract, clean, and analyze data for reporting and insights.
- Collaborate with stakeholders to understand data requirements and deliver solutions.
- Apply statistical and machine learning techniques to solve business problems.
- Ensure data quality, integrity, and governance across systems.

Required Skills:

- Postgraduate degree in **Analytics, Data Science, Statistics, Computer Science**, or a related field.
- Proficiency in **Python** for data manipulation, analysis, and automation.
- Strong command of **SQL** for querying and managing relational databases.
- Good understanding of **Data Modelling** (star/snowflake schemas, normalization).
- Familiarity with **Data Warehousing** concepts and tools (e.g., Snowflake, Redshift, BigQuery).
- Experience with data visualization tools (e.g., Power BI, Tableau) is a plus.

Preferred Qualifications:

- Experience with cloud platforms (AWS, GCP, Azure) and data pipeline tools (e.g., Airflow, dbt).
- Knowledge of ETL/ELT processes and best practices.
- Exposure to version control systems like Git.
- Strong analytical thinking and problem-solving skills.

Education:

- Master's degree in **Analytics, Data Science**, or a related discipline.
