

Job Description – Battery Design Engineering Intern

Position: Battery Design Engineering Intern

Department: R&D – Battery Engineering

Location: Mohan Estate, Delhi (or as applicable)

Duration: 6 Months

Reports To: Battery Design Lead / Engineering Manager

Role Summary

We are looking for a passionate and motivated Battery Design Engineering Intern to support the development of lithium-ion battery packs for electric vehicles. The intern will work closely with the Battery Engineering team and gain hands-on exposure to battery pack design, CAD modeling, validation activities, and product development processes.

Key Responsibilities

Battery Pack Design Support

- Assist in developing 3D CAD models and 2D drawings for battery pack components.
- Support the design of battery enclosures, brackets, cell holders, and structural parts.
- Help create engineering drawings and maintain design documentation.

Engineering & Analysis

- Support basic tolerance stack-up studies and design evaluations.
- Assist in reviewing CAD models for manufacturability and assembly.
- Work with the engineering team on design improvements based on test results.

Testing & Validation Support

- Assist in battery pack testing activities such as thermal, vibration, and environmental tests.
- Help collect, organize, and analyze test data.
- Support documentation of validation reports and observations.

Cross-Functional Collaboration

- Coordinate with Battery, Mechanical, Manufacturing, and Quality teams for project activities.
- Support prototype build activities and design reviews.

Required Qualifications

- Pursuing or recently completed B.Tech/B.E. in Mechanical Engineering, Automotive Engineering, Electrical Engineering, or related disciplines.
- Basic understanding of electric vehicle battery systems and lithium-ion technology.
- Strong interest in EVs and battery pack development.

Technical Skills

- Basic knowledge of CAD tools such as CATIA V5, SolidWorks, Creo, or NX.
- Understanding of engineering drawings and GD&T fundamentals.
- Familiarity with manufacturing processes is an added advantage.
- Proficiency in MS Excel and PowerPoint.

Preferred Skills

- Knowledge of battery pack architecture and EV fundamentals.
- Exposure to college projects related to EVs, batteries, or automotive systems.
- Good analytical and problem-solving skills.

Key Competencies

- Eagerness to learn
- Attention to detail
- Team collaboration
- Strong communication skills
- Problem-solving mindset

Experience: Freshers / Final-Year Students / Recent Graduates

Industry: Electric Vehicles (EV), Battery Technology, Automotive R&D

Job Description – Battery Development & Testing Intern

Position: Battery Development & Testing Intern

Department: R&D – Battery Engineering

Location: Mohan Estate, Delhi (or as applicable)

Duration: 6 Months

Reports To: Battery Development Lead / Engineering Manager

Role Summary

We are looking for a motivated Battery Development & Testing Intern to support the validation and testing of lithium-ion battery packs and modules for electric vehicle applications. The intern will gain hands-on exposure to battery testing, data analysis, laboratory operations, and battery performance evaluation while working closely with experienced engineers.

Key Responsibilities

Battery Development Support

- Assist in battery pack and module development activities.
- Support prototype battery assembly and testing activities.
- Work with Battery, BMS, Thermal, and Manufacturing teams on development projects.
- Assist in documenting engineering changes and design improvements.

Testing & Validation Support

- Support execution of battery testing activities including:
 - Charge-discharge cycling
 - Capacity and performance testing
 - Thermal testing
 - Environmental testing
 - Vibration testing
- Assist in preparing test setups and monitoring test execution.
- Ensure proper recording of test observations and results.

Data Analysis & Reporting

- Collect, organize, and analyze test data.
- Prepare test reports, presentations, and documentation.
- Support engineers in identifying performance trends and anomalies.
- Assist in failure investigations and root cause analysis activities.

Laboratory Support

- Assist in operating battery testing equipment under supervision.
- Support maintenance of laboratory records and test documentation.
- Follow laboratory safety guidelines and procedures.
- Help maintain an organized and safe testing environment.

Required Qualifications

- Pursuing or recently completed B.Tech/B.E. in Electrical Engineering, Electronics Engineering, Mechanical Engineering, Automotive Engineering, or related disciplines.
- Basic understanding of lithium-ion batteries and electric vehicle systems.
- Strong interest in battery technology and EV development.

Technical Skills

- Basic understanding of battery testing and validation concepts.
- Familiarity with MS Excel for data analysis and reporting.
- Understanding of electrical measurements and instrumentation.
- Basic knowledge of CAN communication is an added advantage.

Preferred Skills

- Exposure to EV, battery, or automotive projects through academics or internships.
- Knowledge of battery safety and testing fundamentals.
- Familiarity with data acquisition systems or testing equipment is a plus.
- Good analytical and problem-solving skills.

Key Competencies

- Eagerness to learn
- Analytical thinking
- Attention to detail
- Team collaboration
- Effective communication
- Safety-conscious mindset

Experience: Freshers / Final-Year Students / Recent Graduates
