

Technical Skills:

- Strong programming skills in languages like Python, Java, or C++.
- Familiarity with data engineering tools and frameworks (e.g., Apache Spark, Hadoop).
- Basic knowledge of machine learning concepts and algorithms.

Collaborative Nature:

Ability to work collaboratively in a fast-paced and innovative environment.

Problem-Solving Skills:

Excellent problem-solving and analytical skills.

Benefits of working with Euler Motors:

Euler motors has a very collaborative work atmosphere. When you Join Euler Motors, you do more than simply join a

company to advance your career. You become part of our family, a group of talented individuals who drive

innovation, embrace change and strive to become the industry leaders.

What You Will Do:

Data Engineering:

- Collaborate with cross-functional teams to collect, process, and store data from various sources.
- Design and develop data pipelines to enable efficient data analysis and machine learning.
- Ensure data quality and integrity to support data-driven decision-making.

Machine Learning:

- Work on machine learning projects, including model development, training, and evaluation.
- Apply machine learning algorithms to solve complex problems in the EV domain.

- Collaborate with data scientists to deploy machine learning models into production.

Data Science:

- Analyze large datasets to derive actionable insights and trends.
- Develop data-driven solutions to address business challenges.
- Create data visualizations and reports to communicate findings effectively.

Time Science:

- Explore time series data to predict and optimize EV performance and efficiency.
- Implement time series forecasting models for various EV components.
- Continuously improve and optimize time series analysis techniques.

IoT Devices:

- Contribute to the development and integration of IoT devices in EV systems.
- Monitor and maintain IoT device functionality and performance.
- Collaborate with hardware teams to ensure seamless IoT device integration.
