

BlackRock

Software Engineering Intern – Aladdin Engineering Gurgaon/Mumbai/Bangalore, INDIA

BlackRock is a global asset manager and technology provider helping millions of people achieve financial well-being through disciplined investing, data, and technology.

Our engineers build and operate Aladdin, the technology platform that supports investment decisions and risk management for BlackRock and clients worldwide.

For more information visit www.blackrock.com

As an intern, you will contribute to real engineering problems on a platform used across global financial markets.

What are we?

Our engineering teams build and evolve **Aladdin's core platforms**, data capabilities and digital experiences. We solve complex problems in scale, reliability, analytics and automation to help investment professionals make better decisions. Interns contribute to production-grade solutions with real client and business impact.

What will you do as an intern?

- Take ownership of a meaningful engineering challenge from idea to implementation, designing, building, testing and refining a solution with guidance from experienced engineers. By the end of the internship, you should have created something tangible, useful and demonstrably your own.
- Work with modern engineering technologies leveraging GenAI and AI, across Java, Python, cloud platforms, distributed systems, data engineering and AI-enabled solutions. Depending on the team, you may also gain exposure to Kubernetes, Kafka, APIs, modern web frameworks and developer automation. The focus is on applying the right technology to solve real business and client problems.
- Learn how software is built, deployed, observed and supported in a production environment, with exposure to monitoring, incident response, operational resilience, security and reliability practices.
- Understand how your work connects to real business and client outcomes across a global financial technology platform.
- Apply feedback quickly, demonstrate intellectual curiosity and build confidence in new technologies, tools and domain concepts throughout the internship.

What are we looking for?

The internship will be based in Gurgaon or Mumbai and will combine hands-on engineering work with structured learning, mentoring and broader exposure to BlackRock. Candidates should be pursuing a relevant undergraduate or postgraduate degree and meet the stated graduation-year eligibility. High-performing interns may be considered for future opportunities, subject to business needs and program criteria.

What does success look like?

Success will be measured by the quality, usefulness and impact of your contribution. This may include delivering working software, improving reliability or performance, automating a manual process, strengthening developer productivity or validating a new technical approach. You will be expected to demonstrate clear thinking, sound engineering judgement and the ability to incorporate feedback.
