

Job Summary:

We are seeking a passionate and skilled Software Developer with strong programming expertise in **Python and/or JavaScript**, and a foundational understanding of **LangChain**. The ideal candidate will contribute to building intelligent applications leveraging LLMs and AI frameworks, while collaborating with cross-functional teams to deliver scalable and efficient solutions.

Key Responsibilities:

- Design, develop, and maintain robust applications using **Python** or **JavaScript**.
- Integrate and experiment with **LangChain** to build LLM-powered workflows and tools.
- Collaborate with data scientists, ML engineers, and product teams to implement AI-driven features.
- Write clean, maintainable, and well-documented code.
- Participate in code reviews, testing, and debugging.
- Stay updated with the latest trends in AI, LLMs, and open-source tools.

Required Skills:

- Strong programming skills in **Python** and/or **JavaScript**.
- Basic understanding of **LangChain** concepts such as chains, agents, tools, and memory.
- Familiarity with REST APIs, JSON, and asynchronous programming.
- Experience with version control systems like **Git**.
- Good problem-solving and analytical skills.
